Layer Styles Many items in a Photoshop document can be selected by right-clicking it. Right-click > Selection option > Selects that item. Photoshop has hundreds of layer styles. Some styles are exclusively used for certain document types. For example, the "Outline" style usually only works with text layers. Some Layer Styles are available in the Appearance palette. Symbols and Type Most document types in Photoshop have a Symbol palette, which has a variety of symbols. Many symbols can be placed into any document to indicate different ways to crop or arrange, if you want to highlight different elements in an image. This is especially useful for screen images, or if you want to keep an image from an old version. The Symbol palette in the Pathfinder palette (Window > Pathfinder) has a variety of symbols. If you want to add them to the current image, go to Window > Symbols. With the Type palette, you can add a symbol to any type of layer. In the Type palette, you can find the tools that have symbols and change them to match your needs. The Type palette in the Appearance palette can help add symbols to layers. Workflow Some Photoshop workspaces have their own workflow. Each workspace has a different way to work: It is recommended that you change your workspace from time to time to help optimize your workflow. One of the most useful workspaces is the Layer workspace. Here you have a variety of tools to add, move, and remove layers. If you are going to do any editing with layers, this is the workspace you should be in. In this workspace, you can also create shapes. Shapes can be connected or disconnected, so you can use them for retouching. The Adjustment Workspace is another workspace that is useful in Photoshop. In this workspace, you can make changes, retouch, change colors, and resize objects. One of the most useful Photoshop tools is the Hue/Saturation/Luminance palette. With this, you can make changes to colors and remove highlight or shadow. The Brush (Tools > Brush) has a variety of tools, such as bokeh, airbrush, and stipple brushes. Like the layer tools, the Brush has a variety of tools and the tools can also be used on other types of layers
