...[Role of amiodarone and its derivatives in the treatment of supraventricular and ventricular tachycardia]. The second generation antiarrhythmic agent amiodarone was introduced in the treatment of ventricular tachycardia (VT) in the early 1980s. It is a phenytoin-like agent which exhibits a high VT efficacy (87%) and has proven to be effective in patients with not tolerated or inefficient to conventional antiarrhythmic agents. Amiodarone is a safe and effective antiarrhythmic agent. In the treatment of VT (supraventricular and ventricular) in selected patients, it can be considered the drug of choice. The drug is well tolerated and successful dose adjustment is usually not a problem. In the treatment of arrhythmias, the drug works by many different mechanisms. Amiodarone has been shown to have the following favorable properties: Hypersensitivity reactions, thyroid dysfunction and other organ toxicities, auto-antibodies, cardiotoxicity. Some of these side effects may be overcome by the appropriate selection of dose and drug form. Amiodarone may be better tolerated than other "quinidine-like" agents because it has a lower intrinsic antiarrhythmic activity. Amiodarone is a safe, effective and well tolerated therapy for the treatment of patients with supraventricular and ventricular tachyarrhythmias. The drug is indicated for paroxysmal supraventricular tachycardia and is also useful in the therapy of supraventricular and ventricular arrhythmias. Q: Draw an arrow with a width smaller than the width of the text I would like to draw an arrow like this one with the text in its middle: I tried the following code, which places the arrow with its middle below the word "name":

```
\documentclass[a4paper,12pt,oneside,geometry=a4paper]{article} \usepackage[utf8]{inputenc} \usepackage[german]{babel} \usepackage[paper=a4paper]{geometry} \usepackage{amsmath} \usepackage{graphicx} \usepackage{amsmath} \usepackage{graphicx} \begin{document} \renewcommand{\mathpalette}{\m@th\

When I tested the same request without RESTKit the request is being correctly processed. Can you tell me how to correctly connect with RESTKit? Thanks A: You need to add the right headers to your request. You can specify the required Headers in your RestKit initializer. If you don't, then it's not going to work. `$config = array('baseUrl' => '', 'port' => 443, 'usePathInfo' => TRUE, 'useQueryStringParameters' => TRUE, 'requestSerialization' => ['accept' => 'application/json', 'content-type' => 'application/json'`
