* For the time being only single player mode is available. Multiplayer mode is in development. * Drop ships keep moving on the screen, some can be destroyed or pick-up items if you hit them. * Enemies fires bullets and rockets at you, and sometimes they are able to dodge your bullets! * One hit will kill you (some bosses will kill you in few hits). * Collect power-ups to boost your ship. * You can upgrade your weapons and skills, it will increase the number of bullets fired, but also the amount of damage it does. * Dash skill allows to move faster, but it has the disadvantage that Your ship will leave behind a trail (which will become visible if you're passing very close to an enemy ship) * Shield can be generated, but you need to charge it with energy cells. * Depending on the level other enemies will block your way or drop power-ups. * Some enemy drops mini-bosses while you're passing, they are much stronger than bosses. You also encounter mini-bosses in the bonus stage. * The bonus stage has 4 levels, and you can play them in any order you want (bonus level 1 will become available only after completing level 4). Each bonus stage has different set of enemies, power-ups, challenge elements. * Bonus levels contain more powerups to help You in the fight. * On all levels there are 10 waves (5 waves of bosses + 5 waves of mini-bosses). Waves are separated by 2 breakers and they both have a time limit. * On levels with bosses the waves are cyclic, meaning there are a certain number of waves and after each boss there are no waves, you will have to play through all of them. * Defeating bosses grants You an extra life. * During boss battles there is a special power-up mechanic: use the special skill in order to get the power-up. Once You collect all the power-ups You will see the score increase. * Game speed depends on the number of cores You have in use. * Game supports 4 button gamepad. * On most stages You will use a single button to fire bullets, and there will be no other power-ups to activate.
