Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode - in Lib. mode however everything slows because the JPEG previews are used. So far I am not sure how the Jpegs are used as previews when you have the smart previews (DNGs) available. But have to say that I am happy with 5.2 RC although I will say bye-bye to LR the day they make it part of CC. Regards! Sren

When I started on my own artistic venture, I was happy with my humble pallet of friends and tools, but I needed to go further. The tools felt too clumsy and the art was a little too basic to be of any practical use. I needed to go outside for bigger ideas! Enter the Mac Book Pro with its big beautiful screen, and I'm down. My home studio is now full of detachable monitors hanging on one wall (put up with my own technology jokes, please). But I'm not ready to stop there. So I'm looking for the next big thing in my life of art, photography, and music. *For some background:* I've been purchasing art since I was about 14 years old, and I've been using my first computer to make art since the late 1990's. Having a home studio is important to me. I want to be able to produce something that will stick with me throughout my life. I am comfortable with all this technology, and I find it easy to use. Adobe

has a strong reputation for delivering cross-platform tools that are not just affordable but also support multiple types of media, from professional-grade clipart illustrations to personal photos and videos to creative designs and webpages and so on.
